Google doesn't make it obvious how to turn on Chrome dark mode, at least not in the desktop browser. In the Chrome app for Android and iOS, enabling the feature is slightly easier, as we'll explain. Although a dark mode for websites was added to Chrome way back in 2019, in version 78 of the browser, it remains hidden, which means you won't be able to turn it on unless you know exactly where to look. Knowing how to get dark mode in Google Docs is a similarly opaque process. That's a shame, because dark mode is a very useful browser feature. By eliminating harsh bright light, it helps reduce eye strain when you're browsing the web, especially on sites with white backgrounds, including many of Google's own services. Dark mode also helps extend battery life when you're using your laptop or mobile device, because dark sites require less power to display. We'll explain how to turn on Chrome dark mode in the desktop and mobile versions of the browser. Like many Windows programs, Chrome will switch to dark mode when you set Windows to use its "dark theme." However, this doesn't darken the contents of web pages, so it's far from a "full" dark mode. Here's how to turn it on, anyway. 1. Right-click your Windows desktop and choose Personalize from the context menu. (Image credit: Microsoft) 2. Click Colors under Personalization and select Dark from the "Choose your color" drop-down menu. (Image credit: Microsoft) 3. Alternatively, choose Custom in the menu and select Dark under the option "Choose your default app mode." (Image credit: Microsoft) 4. Chrome will now switch to a dark theme, which will apply to the browser's toolbars, tabs, menus, settings, and your homepage, but not to websites. (Image credit: Microsoft) How to turn on Chrome dark mode for websites As explained above, activating dark theme in Windows only makes cosmetic changes to the Chrome browser, but not to the contents of web pages. Chrome's hidden dark mode, however, is much more useful. It reverses the colors in websites to turn white backgrounds to black and black text to white. It also makes images in pages less garish, so they don't strain your eyes. Here's how to turn on Chrome's secret dark mode. 1. Open the Chrome desktop browser and type, or copy and paste, `chrome://flags/#enable-force-dark` into the address bar. Press Enter to access Chrome's Experiments page. (Image credit: Google) 2. The option Force Dark Mode for Web Contents will be highlighted at the top of the page. Click the menu next to this and select Enabled. (Image credit: Google) 3. Click the Relaunch button in the bottom-right corner of the browser. When Chrome relaunches, dark mode will be applied to the contents of all web pages. (Image credit: Google) How to turn on Chrome dark mode on Android and iOS The Chrome mobile app for iPhone, iPad and Android phones and tablets makes it easy to turn the Dark theme on (and off) in the browser. However, as with the desktop browser, this only applies to menus and settings pages, unless you combine it with the proper dark mode we've described above. Here's how to turn on full dark mode on Android and iOS. 1. Tap the three-dot button in the top-right corner of the Chrome app and choose Settings from the menu that opens. (Image credit: Google) 2. Swipe down and tap Theme. On the Theme screen, select Dark and the Chrome browser will turn dark. However, when you load a web page, you'll see it's unaffected by the theme. 3. Type `chrome:flags` into the address bar and press Enter on your phone or tablet keyboard. Type dark into the "Search flags" search box. (Image credit: Google) 4. Tap the menu below the option Force Dark Mode for Web Contents and select Enabled. Tap the Relaunch button in the bottom-right corner to apply the change. (Image credit: Google) 5. Alternatively, to save you delving into Chrome's settings to turn dark mode on and off, select Enabled for the option Darken websites checkbox in themes settings. (Image credit: Google) 6. Relaunch the Chrome app and go back to the Theme screen (see step 2). You'll now see a check box that lets you Darken websites when you turn on the mobile browser's Dark theme. (Image credit: Google) Today's best Chromebook Laptops deals (opens in new tab) (opens in new tab) (opens in new tab) (opens in new tab) (opens in new tab) (opens in new tab) (opens in new tab) View Deal (opens in new tab) Google Chrome has had a built-in dark theme like Mozilla Firefox and Microsoft Edge since Chrome 74. You can even apply a dark theme to every web page you visit using third-party themes or an extension. Here's how. Chrome now offers a built-in dark mode on Windows 10, Windows 11, and macOS. It even makes all of Chrome's context menus dark, too. How to Enable Chrome's Dark Mode on Windows 11 Google Chrome's built-in dark theme respects your system theme on Windows 11, too. Open the Settings app by typing "Color Settings" into the Start menu and hitting Enter, or clicking "Open." Alternatively, you can open the Settings app and navigate to Personalization > Color. Click the drop-down menu to the right of "Choose Your Mode" and select "Dark." Then close out the Settings app and launch Google Chrome. Unless you've manually set Chrome's theme, it'll match your system's setting. How to Enable Chrome's Dark Mode on Windows 10 Google Chrome gained a built-in dark theme on Windows in Chrome 74. To enable Chrome's dark theme, just switch your operating system to dark mode. On Windows 10, head to Settings > Personalization > Colors and select "Dark" under "Choose your default app mode." On a Mac, enable the system-wide dark mode. Here's how to activate Chrome's new dark mode if you'd rather use dark mode in Chrome and light mode throughout the rest of Windows 10. That article also includes instructions for tweaking the color of Chrome's window title bars. RELATED: How to Enable Google Chrome's Dark Mode on Windows 10 How to Enable Chrome's Dark Mode on macOS Dark mode for Google Chrome became available on macOS in Chrome 73. Like with Windows, Chrome on macOS will respect the current system theme. To change the system theme, first open up System Preferences. (You can open it by clicking the Apple menu on the bar at the top of your screen and selecting "System Preferences.") Click the "General" icon in the System Preferences window and then click "Dark" to the right of Appearance. You can also type "dark" into the search bar in the top right to find this option. Bonus: Apply a Dark Theme Chrome supports user-created themes, which you can download from the Chrome Web Store. To give Chrome a dark interface, all you have to do is install a dark theme. Google even provides a helpful collection of editor-selected dark themes. This will give your Chrome browser a dark mode on Windows 7, Linux, Chrome OS, and any operating systems without a native dark theme available. Update: Google now offers some official Chrome browser themes, including a "Just Black" dark mode theme. You may want to give that a try. We recommend Morpheon Dark, which is the most popular dark theme in the Store. Unlike some other dark themes, it provides a decent amount of contrast between your active tab, which is a bit lighter, and your inactive tabs, which are darker. This theme turns the tab bar, title bar, toolbar, and New Tab page dark. That's all you can theme in Chrome. You can't make Chrome's context menus or Settings page dark, for example. If you ever want to switch back to Chrome's default theme you can; click menu > Settings. Look for the Themes option under appearance, and then click "Reset to Default." Bonus: Install a Dark Mode Extension Warning: By their very nature, browser extensions present a possible security risk. You should use as few as possible. A theme changes your browser's interface, but most websites use white backgrounds. Sure, you can enable dark mode in Gmail and some other websites individually, but that only works for one website at a time. To get a dark mode for the entire web, install the Dark Reader extension from the Chrome Web Store. Some other browser extensions work similarly, but we like Dark Reader most out of all the dark mode extensions we've tried. This extension automatically applies a dark style to every web page you visit, and you can click the Dark Reader button on your toolbar to adjust it. You can also disable dark mode for a website from here. The extension even lets you set sites to never open in dark mode, which is useful if Dark Reader doesn't work well with a website. Unfortunately, Chrome's Settings pages will always be light unless you enable your system's dark theme. Extensions can't tamper with these for security reasons. Chrome's context menus are provided by the operating system, so you can't turn those dark with an extension, either. RELATED: How to Enable Dark Mode in Windows 10 Windows Dark Mode switches the color orientation on your screen, making light elements dark, and darker elements lighter. It's a feature we've been asking for for years now, one that's specifically designed to be easy on the eyes, especially when working in a dark room. Unfortunately, it doesn't come with many customization options. I found myself recently wanting to use the Light mode in Chrome while maintaining the Dark Mode vibe on Windows itself. It wasn't immediately clear that this was even possible, but with a few tweaks, I think I've figured it out. Note: Close any open Chrome browsers before you start. 1. Type Chrome in the search box on the Taskbar. 2. In the options that are presented, right-click Google Chrome. 3. Select Open file location, to access the executable file. 4. In the File Explorer window that opens up, right-click on Google Chrome executable file. 5. Click Select shortcut. The shortcut will be created on the Desktop. 6. Right-click the Google Chrome shortcut on the desktop to open the context menu. 7. In the menu that opens, click Properties. 8. In the Target text box, at the end of the existing text, add a space and the following command: `--disable-features=DarkMode` 9. Click Apply to finalize the edit. 10. Click OK to close the window. Now every time you open the Chrome browser from this shortcut, it will open in Light mode even when Dark mode is selected in Windows 10. To open Chrome as per the mode selected for Windows 10, open it from the Start menu. Credit: Microsoft
